## **IMAGE-BASED METHOD**

- STRUMENTO DI RIPRESA ECONOMICO (potenziali distorsioni da calibrare)
- MODELLI DI CALCOLO NON DETERMINISTICI (risultati potenzialmente differenti ad ogni processamento)

**RILIEVO DIGITALE** 

- REGISTRAZIONE ACRITICA (eventuale perdita di punti notevoli)
- RISULTATO CONDIZIONATO DA CONFIGURAZIONE AMBIENTALE (potenziali influenze di illuminazione, occlusioni, materiali, riflessioni, ecc)
- FASE DI POST-ELABORAZIONE IMPEGNATIVA (necessità di tempi e risorse HW, modelli di classificazione, ecc.)
